

Excerpt from Prof John B. Young's comments and praise on the manuscript of Abhijit Guha's PhD dissertation at University of Cambridge:

Fine so far, but I suggest a paragraph of conclusion would finish it off nicely. This would describe how, due to your research, the world is well under way to a proper understanding of nucleation in turbines after seventy years of abortive attempts! (If you tell people how good you are without appearing too conceited they are likely to believe it without disliking you!)

John B Young, the Hopkinson and ICI Professor of Applied Thermodynamics at University of Cambridge

Fine so far, but I suggest a paragraph of conclusion would finish it off nicely. This would describe how, due to your research, the world is well under way to a proper understanding of nucleation in turbines after ~~sixty~~ seventy years of abortive attempts! (If you tell people how good you are without appearing too conceited they are likely to believe it without disliking you!).
