RESEARCH INTEREST AND FOCUS

Signal Processing and Machine Learning for Healthcare Applications

The focus of the research of Medical Signal Processing and Machine Learning Group is on the integration of data, knowledge, and tools necessary for efficient knowledge discovery in the decision-making process associated with information extraction and computational intelligence. The group's research addresses the design and development of signal processing and machine learning techniques and the interpretation of biomedical signals to improve monitoring, diagnosis and prognosis of physiological

processes. The group explores new methodologies for multimodal, multi-scale and multi-channel acquisition, processing and interpretation of clinically relevant information from biomedical signals. The principal objective is to improve the non-invasive diagnosis capability through the characterization of physiological phenomena, and to enhance early detection of diseases like cardiac, respiratory and sleep disorders. The Medical Signal Processing and Machine Learning research group encourages the development of theoretical and practical methods of information processing with special emphasis on the development of healthcare open data-set repository.
